1 Goals

The primary goal of the course is to acquaint students with the basics of the Python programming language and to introduce them to some of the many tools available for data collection and data analysis.

2 Practice

The course will use two required texts *Python for Dummies* (Stef Maruch and Aahz Maruch) and *Data Wrangling with Python* (Jacqueline Kazil and Katharine Jarmul), but will also make heavy use of online course notes and freely available Python software.

There will be weekly assignments and 3 inclass quizzes, a midterm, and a final project.
3 Learning Outcomes

1. Students will be able to read many Python programs and understand what they are doing and what their requirements are;

2. Students will be able to write simple scripts that accomplish basic data analysis tasks;

3. Students will learn how to apply some basic data analysis tools (available in Python and many other environments) such as plotting tools, text classifiers, and network analysis;

4. Students will learn how to transform data of various kinds (especially text data) into a form in which useful numerical analysis and classification can be done.

5. Students will learn some of the basic challenges of understanding multivariate data, and some visualization strategies available in Python gaining insights into variable interdependencies.

4 Pre-requisites

No course pre-requisites. No knowledge of programming will be assumed. Upper division standing. Some openness to acquiring computational skills. Some knowledge of what counts as interesting data in your own Social Science.

5 Grading

Grading will be based on exercises, quizzes, and a final project.

- Exercises: 40%
- Quizzes: 20%
- Midterm 20%
- Final project 20%
6 Grading Assignments

Grading of problem sets is as follows:

Plus  Every problem attempted, effort on all problems, commented code. Even if the answers to some are wrong or give incorrect results, effort has been made and code has been tested. If something doesn’t work, comments explain what happens.

Check Very little or no effort made for at least one problem, code has very obviously not been tested, or code is uncommented.

Minus No effort made on at least half the problem set, or problem set not turned in.

To get a C in this class, you must earn a Plus on the majority of the assignments. Three Minus scores are a cause for concern and will require a meeting with the instructor. Late assignments will be graded according to the lateness policy, as solutions will be posted immediately.

7 Late Assignments

The general structure of the course is not well-suited to late assignments or missed quizzes. Assignment solutions will be discussed in detail on the day they are turned in, and thus students who turn assignments in late will be at an advantage. Quizzes are designed to test understanding of foundation needed for further work, and without those foundations, progress will be slowed. However, to allow for some flexibility, late assignments will receive partial credit. Here is the lateness policy:

1. Up to one week late: 50% credit for assignment (this basically turns a Plus into a Check, and a Check into a Minus). Late assignments must include all problems for which solutions have not been posted in order to receive any credit at all.

2. More than one week late: not accepted
8 Attendance

Attendance is not a formal part of your grade.

However, be aware that assignments are, and extensive amounts of class time will be devoted to working through exercises like those on the assignments. Similarly, hints on how to solve problems on the assignments and the midterms are handed out liberally in class. These hints will not be posted on the web pages.

9 Group Work

Group work is encouraged on the assignments. The midterm and final project should be completed without any help. To be clear on this, collaboration or group work on the midterms and finals will be considered cheating.

When turning in collaborative assignments, your collaborators should be identified on your paper. The code you write on your group assignments should be your own.

10 Office Hours

Th 9:30-10:30
Tu, Th 11:00-12:00
Tu 3:30-4:30
by appointment
