Usage typology for expressions that **may** be deictic

Types of deixis

Personal Deixis

A linguistic expression specialized for picking out a particular person in the speech context, who may or may not have already been linguistically evoked.

1 One of several classic types

1 Person (*I, you, ...*): Birner , p. 7. (Ex. 103)

- (1) a. **I** ordered a Kindle 2 from Amazon. How could *I* not?
b. I'm proud of *me*. (no Prin B violation)

Second *I* anaphoric or deictic?

2 Time (*now, then, ...*)

3 Place (*here, there ...*)

2 New

1 Discourse (*former, following, above*)

2 Social (*tu/vous*)

Deixis and propositions

- 1 Truth conditional meaning
- 2 Sentences denote propositions, which are sets of possible worlds, the worlds the sentence is true in.
- 3 But what about sentences containing words like *I*? What proposition does *I am the mother of Napoleon.* express?
- 4 And we know the full story about **deictic anchoring** is way more complicated than that...

Katz and Fodor ignore deictic anchoring

Katz and Fodor 1963

- (2)
- a. The bill is large.
 - b. I'll be back in an hour. (sign on door)
 - c. Meet me here a year from now with a stick about yea big.

Being clear about meaning

You have to act as if you found the sentence on a piece of paper with no indication of its author, the addressee, or the occasion of its being produced.

Is there a set of deictic expressions?

Find the deictic NPs in the following:

- (3) a. The jeep was in bad shape. The door was bashed in.
- b. I walked in slowly.
- c. The Taurus, expected to appear in showrooms by the end of the week, looks nothing like its predecessors.
- d. The old rule of thumb – that employers pick up 80% of the tab – no longer applies. That's reason enough for employees to be cautious.

Referential vs attributive

Referential uses are quasi-deictic

- 1 Smith's murderer is insane.
- 2 The man drinking champagne is Lord Godolphin.

Levinson's division

I saw some of the children

Bibliography I

Fillmore, C.J. 1997.

May we come in?

In *Lectures on Deixis*, 5–26. Stanford, California: CSLI Publications.

Katz, Jerrold J., and Jerry A. Fodor. 1963.

The structure of a semantic theory.

Language 39:170–210.
